## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed 22 November 2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Drawings***

Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2836

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-15 rejected under 35 U.S.C. 102(a) as being anticipated by Nakamura (JP 2004072592).

Nakamura discloses a circuit for inductive load control of two loads. Two PWM signals are outputted to FETs 23A and 23B along separate paths (Figure 1). Included with an inductor 28 are capacitors 26 and 27, connected to ground, forming a filter. The falling edge of one PWM signal coincided with the rising edge of the other PWM signal. Pulse duty factor may be 50% (Figures 3, 4, and 5). The PWM signals are output according to a driving command from an Engine Control Unit 32.

With regard to claims 7 and 15, the pi filter 25 of Nakamura will act to eliminate high frequency currents, enabling the frequency of the inductor current to remain stable.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- US 6,891,342 (Nakamura) claims priority of the above document.
- WO 9858445 (Kessler) teaches PWM control of two loads, using 50% pulse duty.
- EP 982194 (Rech) teaches PWM control of two exclusive-on loads.
